

Swarmbly AI — Documentation Index · Índice de documentación

One page, everything that exists, what each thing is for, and in which order to read it.

Una sola página: todo lo que existe, para qué sirve cada cosa y en qué orden leerlo.

Not everything listed here is necessarily present yet. Several of these documents are produced separately from this scaffolding and land in the repository on their own schedule. A missing file is expected, not an error. If a link below does not resolve, that document has not been added yet.

No todo lo que aparece aquí está necesariamente presente todavía. Varios de estos documentos se elaboran por separado y llegan al repositorio a su propio ritmo. Que falte un archivo es lo esperable, no un fallo. Si un enlace no resuelve, ese documento aún no se ha añadido.

Versions covered / Versiones cubiertas: [whitepaper v1.4](#) · [protocol specification v0.2 revision 2](#) · [reference implementation V0](#).

Read this if...	Go to
You have two minutes and want the argument	ONEPAGER_EN.md · ONEPAGER_ES.md
You have five minutes and want to know what Swarmbly is	WHITEPAPER_EN.md Section 1 (or the repository root README.md)
You want the full argument for the design	WHITEPAPER_EN.md
You are going to implement a node or a client	SPEC_EN.md
You want to see the numbers	the dashboard, Swarmbly_AI_Dashboard.html
You want the reasoning, the alternatives, and the open questions	the master analysis document
You want to know where an idea came from	REFERENCES.md
You want to contribute	../CONTRIBUTING.md
You want to know who controls this	../GOVERNANCE.md

The documentation set

Whitepaper — the argument

[WHITEPAPER_EN.md](#) · [WHITEPAPER_ES.md](#) — *v1.4*

The case for Swarmbly: why fragmenting the *problem* is a different and better bet than fragmenting the *model*, what the shotgun-assembly analogy buys, the architecture at a level a reader can hold in their head, the failure and threat model, and what has and has not been demonstrated. This is the document submitted to arXiv (see [../publication/ARXIV_SUBMISSION.md](#)) and the one to cite. Read it first.

El planteamiento de Swarmbly: por qué fragmentar el problema es una apuesta distinta y mejor que fragmentar el modelo, qué aporta la analogía del ensamblado shotgun, la arquitectura a un nivel que quepa en la cabeza, el modelo de fallos y de amenazas, y qué se ha demostrado y qué no. Es el documento que se envía a arXiv y el que hay que citar.

Protocol specification — the contract

[SPEC_EN.md](#) · [SPEC_ES.md](#) — *v0.2, revision 2*

Normative. What an implementation must do to interoperate: message schemas, task record format, the decomposition and assembly contracts, overlap declaration, consensus rules, node obligations, error and timeout behaviour, and versioning. Written so an independent implementation can be built from it without reading the reference code — and if it cannot, that is a bug in the specification, not in the reader.

RFC 2119 keywords (MUST, SHOULD, MAY) are used and mean what they say. Changes go through the SWIP process ([../CONTRIBUTING.md](#) Section 6).

Normativa. Lo que una implementación debe hacer para interoperar: esquemas de mensajes, formato de registro de tarea, contratos de descomposición y ensamblado, declaración de solapamiento, reglas de consenso, obligaciones de los nodos, comportamiento ante errores y timeouts, y versionado. Escrita para que se pueda construir una implementación independiente sin leer el código de referencia; si no se puede, es un fallo de la especificación, no de quien la lee.

Master analysis documents — the reasoning

[Swarmbly_AI_Master_Document_EN.md](#) · [Swarmbly_AI_Documento_Maestro_ES.md](#) (also distributed as [.pdf](#))

The long-form working document behind the whitepaper: the full analysis, the design alternatives that were considered and rejected and why, the comparison against Petals and the rest of the distributed-inference landscape, the governance and publication reasoning, and the open questions. The whitepaper is the conclusion; this is the work. Read it when you want to know *why* a decision went the way it did, or before proposing that it go the other way.

El documento de trabajo extenso que hay detrás del whitepaper: el análisis completo, las alternativas de diseño que se consideraron y se descartaron y por qué, la comparación con Petals y el resto del panorama de inferencia distribuida, el razonamiento de gobernanza y publicación, y las preguntas abiertas. El whitepaper es la conclusión; esto es el trabajo. Léelo cuando quieras saber por qué una decisión salió como salió, o antes de proponer que salga al revés.

References — the bibliography

REFERENCES.md (also distributed as Swarmbly_AI_References.pdf)

The authoritative bibliography: distributed and collaborative inference, volunteer and peer-to-peer computing, task decomposition and LLM orchestration, sequence assembly and genomics, consensus in untrusted systems, and open-source governance. Every claim about prior work in the whitepaper and the master documents traces back to an entry here.

This is also the file CITATION.cff defers to for full bibliographic detail: where that file leaves a reference incomplete, the complete entry lives here.

La bibliografía de referencia: inferencia distribuida y colaborativa, computación voluntaria y P2P, descomposición de tareas y orquestación de LLM, ensamblado de secuencias y genómica, consenso en sistemas no confiables y gobernanza de software libre. Toda afirmación sobre trabajo previo en el whitepaper y en los documentos maestros se remite a una entrada de aquí.

Dashboard — the numbers

Swarmbly_AI_Dashboard.html

Self-contained interactive HTML. Open it in a browser; nothing to install and no network access required. Presents the measured results, the comparative analysis, and the state of the V0 reference implementation in a form that is faster to interrogate than a table in a PDF.

Every figure it displays is backed by a reproducible measurement — the measurement rule in ../CONTRIBUTING.md Section 5 applies to this dashboard as strictly as it applies to a pull request. If a number appears here without a reproducible source behind it, that is a defect worth an issue.

HTML interactivo y autocontenido. Ábrelo en un navegador; no hay nada que instalar y no necesita red. Presenta los resultados medidos, el análisis comparativo y el estado de la implementación de referencia V0 en un formato más rápido de interrogar que una tabla en un PDF. Toda cifra que muestra está respaldada por una medición reproducible: la regla de medición de ../CONTRIBUTING.md Section 5 se aplica a este panel con el mismo rigor que a un pull request.

Related documents outside docs/

These live in the repository root or in publication/, and are listed here so this page is a complete index.

File	What it is
../README.md	Project overview and quick start
../LICENSE	The full GNU AGPL v3.0 text — verbatim, 661 lines
../NOTICE	Copyright, license summary, and the AGPL Section 13 network-use note
../CONTRIBUTING.md	EN/ES. DCO sign-off, why not a CLA, code style, the SWIP process, the measurement rule
../GOVERNANCE.md	EN/ES. Current status, the Verein → Stiftung path, what the Foundation will and will not do, and what would count as capture
../TRADEMARK.md	Trademark policy. Marks are not registered; statement of intent
../CITATION.cff	Machine-readable citation metadata (CFF 1.2.0)
../.zenodo.json	Zenodo deposition metadata
../publication/ARXIV_SUBMISSION.md	arXiv submission checklist: cs.DC primary, endorsement, licence choice, metadata, ordering
../publication/IPCOM_DISCLOSURE.md	Defensive-publication disclosure formatted for IP.com / InnovationQ
../publication/PRIOR_ART.md	EN/ES. Prior-art strategy, the enablement problem, the three-layer stack, and the dated log
../publication/GITHUB_READY.md	Pre-push state of the repository: what is verified, what is deliberately blank, and the exact first-push sequence
NAMING.md	EN/ES. Why the project is called Swarmbly, and what the name deliberately does not claim
RESULTS_V0_V3C.md	First measurements against real models: the corrected coherence-tax curve, the go/no-go verdict, and the V3c agreement result
../.github/ISSUE_TEMPLATE/swip.md	Swarmbly Improvement Proposal template

Conventions

- **Bilingual documents keep EN and ES in sync.** If you change one and cannot do the other, say so in the PR so it is tracked rather than silently drifting (../CONTRIBUTING.md Section 4).
 - **Domain vocabulary is fixed and is used precisely.** read, contig, overlap, scaffold, consensus, coverage carry their shotgun-assembly meanings throughout. Do not introduce synonyms for concepts that already have names.
 - **PDFs are generated, not authored.** The Markdown is the source of truth. A .pdf next to a .md is a build artifact; edit the .md.
 - **Version numbers are stated in each document's header** and must agree with ../CITATION.cff and ../zenodo.json. Divergence across those three records weakens the prior-art chain — see ../publication/PRIOR_ART.md Section 6.
-

Contact / Contacto: sebas_saeu@hotmail.com — placeholder; must be replaced before publication.

Public-facing material / Material divulgativo

- ONEPAGER_EN.md · ONEPAGER_ES.md — the two-page argument for the project, written for a general and a prospective-supporter audience: the asymmetry, why model-splitting fails, the reframing, what the first measurements showed, and what they did not show. It states the negative result rather than omitting it — a summary that hides its first failure has not earned its first success. Companion PDFs alongside.
- DIVULGACION_ES.md · DIVULGACION_EN.md — plain-language explainer of the project for a general audience. No jargon, no licensing or funding content. Companion PDFs alongside.
- Swarmby_AI_Explicativo.html — interactive bilingual dashboard that teaches the project by exploration: the bandwidth-gap comparison, the seven-step walkthrough, the confidence-map demonstration and the "when splitting does not work" checkpoint.
- Swarmby_AI_Dashboard.html — technical project dashboard (status, resolutions, architecture, coverage model, limitations, roadmap).

Note on cross-references. All section references in the whitepaper and the specification are written out as "Section 5.4.1" / "sección 5.4.1". The Section symbol is not used anywhere in this documentation set.
